

1. Setup Guide

1. Extract the LegalEase project. 2. Create and activate a Python virtual environment. 3. Install requirements. 4. Configure the Gemini API key in the environment. 5. Run the FastAPI backend. 6. Run the Streamlit frontend.

```
python -m venv .venv python -m pip install --upgrade pip python -m pip install -r requirements.txt
```

2. Environment Configuration

Variable	Purpose	Example / note
GEMINI_API_KEY	Google Gemini credential	Keep secret; never publish a real key
GEMINI_MODEL	Preferred model or auto	Use auto when appropriate for accessible models
GEMINI_FALLBACK_MODELS	Fallback candidates	Comma-separated model IDs
DEMO_MODE	Use local deterministic demo path	true / false
BACKEND_URL	Streamlit -> FastAPI base URL	http://127.0.0.1:8000

3. User Guide

- Choose a legal document type from the selector.
- Enter the involved parties in plain text.
- Enter the effective date or relevant date details.
- Enter terms separated by semicolons for clear parsing.
- Select Generate Document.
- Read the generated preview, edit wording as needed, and then export to TXT, DOCX or PDF.

4. Supported Document Examples

- Employment Contract
- Non-Disclosure Agreement (NDA)
- Lease Agreement
- Employment Offer Letter
- Freelance Work Contract
- Service Agreement
- Consulting Agreement
- Partnership Agreement
- General Contract / Agreement
- Other / Custom

5. Troubleshooting

Issue	Action
Generation fails	Check API key, configured model IDs, network access, and retry provider errors.
Validation error	Complete document type, parties, terms and dates.
Frontend cannot generate	Confirm the FastAPI backend is running on the configured BACKEND_URL.
PDF/DOCX looks different than preview	Review exported file formatting; use the phase-6 render QA step before final submission.

Issue	Action
Public GitHub upload	Remove secrets such as .env credentials, add .gitignore, then commit only safe source/configuration files.

6. Limitations and Legal Notice

- LegalEase is an AI-assisted drafting tool, not a lawyer or law firm.
- Generated content can contain errors, omissions or inappropriate assumptions; the prompt reduces fabrication but does not eliminate model risk.
- Users should verify facts, jurisdiction-specific requirements, mandatory clauses and signature requirements before use.
- The current project does not provide authentication, persistent storage, legal citation research or matter-management workflows.

Documentation status: aligned to the supplied project source package inspected on 28 September 2026.
Re-check configuration values and model availability before any live deployment.
