

1. Demo Goal

Show a complete user journey from entering legal-document facts to reviewing the generated draft and exporting the final result.

2. Recommended Demo Scenario

Field	Demo value
Document type	Non-Disclosure Agreement (NDA)
Parties	Jane Doe (Disclosing Party), TechNova Inc. (Receiving Party)
Effective date	September 23, 2026
Terms	Protect confidential information; Return materials within 30 days; Either party may terminate with 15 days notice

3. Screen-by-Screen Demo Flow

Scene	What to show	Voice-over focus
1. Intro	LegalEase home screen	Project name and one-sentence purpose
2. Input	Document type, parties, date, terms	Explain the four required inputs
3. Generate	Click Generate Document	Describe AI-assisted drafting through the backend
4. Preview	Show headings, clauses and review notes	Explain structured output and placeholders
5. Edit	Change a small phrase or clause if needed	Emphasize human review and editing
6. Export	Download TXT/DOCX/PDF	Show the output formats
7. Final output	Open one exported document	Show readable formatting and signature section

4. Suggested Voice-Over Script

Hello, this is our project, LegalEase - an AI-powered legal document generator. Its purpose is to help users create a structured first draft of common legal documents from a small set of facts and agreed terms. Here I select the document type, enter the parties, date and terms, and generate the draft. LegalEase sends the request through its FastAPI backend to the Gemini-powered generation component. The result is returned as a structured document with headings, clauses and signature sections. I can review and edit the draft in the workspace, and then export it as TXT, DOCX or PDF. The main benefit is faster preparation of a reviewable first draft while keeping a human review step before the document is used.

5. Final Submission Checklist

- Public GitHub repository link prepared after removing secrets and adding safe repository configuration.
- Eight numbered phase folders uploaded in order.
- One PDF placed inside each phase folder.
- Demo video recorded with screen sharing + voice-over.
- Video covers project name, purpose, benefits, working process and final output.
- Google Drive sharing set to Anyone with the link can view.
- Final exported document is opened during the recording to demonstrate the output.

6. Timing Guide

Segment	Suggested duration
Introduction	15-20 sec
Input + generation	45-60 sec
Preview + edit	45-60 sec
Export + final output	30-45 sec
Closing	10-15 sec

Keep the demo focused on the complete workflow. Avoid displaying API keys, personal credentials or unrelated development logs.
